Writing (максимум 40 баллов)

Many elderly people who live alone need a support. It can be modern technology or relatives.

In my opinion, new technology is able to make the way of taking care of feeble people easier. It also can help relatives. Relatives always are able to get to know about the condition of person they take care of. But anyway, there is a problem. For example, devices can disconnect and something will not be detected. It may be a faint and even death.

Honestly, modern technologies are great. They make peoples' life better. And the new sound monitoring system, the Japanese electronics company shows that.

In the conclusion I'd like to say that modern technology really can take care of elderly people properly. But the physical support is significant too.
